DIRECTIONS FOR USING PARTS BOOK

This parts book consists of a complete list of all service parts for the WLC Solo Model built expressly for The Department of National Defense, Canada. It also includes definite stockage recommendations for both Field Service and Base stockage.

The first section of this book lists all service parts, arranged by assembly groups in logical sequence, and very fully illustrated. To locate a part, look up the assembly in the index and turn to the page indicated. Illustrations are as close to the groups of parts as possible.

Following the first section of the book is a numerical list of "O" parts. These "O" parts are screws, nuts, washers, lock washers, steel balls, cotter pins, rivets, and grease fittings that may be used in several assembly groups. Sizes are marked for easy identification.

In the last section of the book, we have listed numerically all part numbers, showing the page numbers on which the parts are listed. This section also shows the list prices of all parts.

Parts Stockage recommendations appear after each item in the first section of the book, with the exception of "O" parts. The recommendations on "O" parts are shown in the Numerical List of "O" Parts.

The suggested stockage of parts for 100 units is to cover light field repairs only. It is suggested that each unit operating 100 units, or nearly 100 units, maintain its stock of spare parts at approximately the quantities shown. The proposed Base stockage for 100 units will cover a reservoir of stock for field repairs, as well as a sufficient supply of spare parts for both light and heavy repairs at a main repair base. The figures are based on a 12-month supply.

Parts stockage figures are carefully worked out on the basis of factory experience lists supplemented by special experience data based on actual Army service. They may vary somewhat, of course, because of differences in climate, terrain, methods of operation, or type of service. However, they should serve as an excellent guide in requisitioning and maintaining stocks.

Harley-Davidson part numbers lend themselves to a strictly numerical arrangement of stock, or of stock record cards, etc. Each part number consists of the part number proper followed by the indication of the year that the part went into our standard production. No. 2076-41A, therefore, is part 2076 (starter crank) that we started to use in 1941. The suffix N after a part number indicates that the part is a standard production item with a special finish for military use.

PARTS NUMBERS ASSIGNED TO OVERSIZE PARTS

It has been Harley-Davidson practice to indicate oversizes or special sizes by adding the letter "S" to a part number and indicating the size. While this worked out satisfactorily for the Harley-Davidson Motor Co., it does not work out so well for those using tabulating records.

So that accurate records can be kept on all special sizes, it has been decided to adopt a separate part number for each size of any part supplied in various sizes. Thus a part number will indicate the size of a part, as well as the part required.

The following part numbers will supersede all numbers covering oversize, or various sized parts required for the Department of National Defense, Canada.
